

Epygi Provides Stability Offshore for INAgip

Founded in 1996, INAgip d.o.o. is an oil and gas exploration and production company located in Zagreb, Croatia. INAgip supplies crude oil and natural gas through continuous exploration and production on various North Adriatic and Marica exploitation fields. Using accelerated exploration approaches, INAgip produces oil and gas while managing and controlling risk factors, in order to reduce negative impacts on the environment.

The Predicament

INAgip's biggest concern when searching

for a telephone solution was system stability. The site of installation was to be on an offshore natural gas platform in the Adriatic Sea. Due to the special nature of the platform, which would need to allow remote access to keep up the maintenance, only highly reliable and top quality products would be acceptable. Because of the nearby natural gas extraction, the system chosen needed to adhere to a variety of safety requirements.

Epygi specifically fit each of these requirements, as well as various others. INAgip also requested that IP telephones

“Epygi’s adherence to the SIP protocol allowed us to link the PBX systems to this newly installed solution,” said Niki Cervar, Technical Director at Dvigrad Telekom.

be installed in areas, bedrooms on the platform for example, where analog telephones could not be installed due to the LAN network and optical cables. In choosing Epygi, INAgip was able to afford future growth, due to the fact that adding IP phones onto an Epygi system is not only simple but cost effective. Using an Epygi system does not require the purchase of additional modules, unlike their previous system which used an ISDN telephone central station.

A Reliable and Stable Solution

According to Niki Cervar, Technical Director at Dvigrad Telekom, “Epygi was chosen for this project first, because of its reliability and stability. Furthermore, Epygi’s adherence to the SIP protocol allowed us to link the PBX systems to this newly installed solution. The installation of the Epygi QuadroM32x met each of INAgip’s specific needs, and in addition, provided free firmware upgrades with quick and knowledgeable support. Epygi was able to provide INAgip with exactly what they were looking for in a phone system.”

About Dvigrad Telekom

Dvigrad Telekom LLC is a company that focuses on ICT systems, networks and IP protocol-based solutions. It is our mission to market high technology products, services and solutions which offer a quick investment return. Our many years of experience in varied environments with both analog and digital telecommunications systems are a testament to our strength.

Our mission is to encourage our clients to take advantage of their investment in new technology and greatly improve their productivity and flexibility.

An important part of our business practice is to achieve customer satisfaction by delivering high quality, reliable equipment ensuring that every client becomes a returning client.

About Epygi Technologies

Epygi Technologies, Ltd., a worldwide provider of award-winning IP PBXs and Gateways supporting small businesses to enterprise’s telephony needs, is a private U.S. company founded in 2000 and headquartered in Plano, Texas. Reliable, secure, easy to install and use, Epygi’s products offer users outstanding benefits and an unparalleled range of features at very economic prices. Customers are able to improve their productivity, lower operating expenses, enhance their image, while affording the latest in telecommunications equipment.
